PRESENTATION

Thanks to modern-day state-of-the art technology, doses - in single session - in a very precise and accurate fashion to cranial and spine AVM show very interesting results. Meanwhile, new schedules and indications have been proposed to treat large AVM. The goal of achieving better outcomes - in terms of local control, survival and lower morbidity - has now a new set of options.

In this scenario, this course aims to supply attendees the change to have a theoretical upgrade with frontal lectures, and, at the same time, to verify the knowledge in practice with dedicated hands on sessions.

Imaging is also crucial in this field : dedicated lecture and practical tips and trick will be exposed and discussed in the round tables.

PARTICIPANTS

Specialists and graduate students in Radiotherapy – Neurosurgery – Radiosurgery – Health Physics – Neurology – Neuroradiologist
